Office Action Summary

Application No.

09/963,567

Applicant(s)

YANG, TAI-HER

Examiner

Dang D Le

Art Unit

2834

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 15 October 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 22-24, 26-29 and 31-43 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 22-24, 26-29 and 31-43 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/15/04 has been entered.

Response to Arguments

2. Applicant's arguments filed 8/30/04 have been fully considered but they are not persuasive. Regarding the Martinek reference, the applicant's argument is on the ground that "the motor of Martinek is a DC rather than an AC motor. As a result, varying the axial position of the rotor has no effect on the electrical characteristics of the motor."

The examiner disagrees. Varying the axial position of the rotor of Martinek has effect on the electrical characteristics of the motor because when the armature (5) is displaced from the center position, the magnetic interaction between the stator (2) and the armature can no longer be 100 %. The specification of the present application also shows that the motor and generator can be either DC or AC. See lines 15-20, page 5. It is noted that the motor in Figure 1 of Martinek can be DC or AC. See Figures 4-6 and column 3.

Therefore, the rejection of claims 22-24, 26, 27, 29, and 34-36 are still deemed proper and repeated hereinafter.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 22-24, 26, 27, 29, 34-36, 39, and 43 are rejected under 35 U.S.C. 102(b) as being anticipated by Martinek (2,978,621).

Regarding claim 22, Martinek shows an electric machine, comprising:

- An electric field structure (2);
- A rotor (5) arranged to rotate relative to the electric field structure;
- A helical structure (9) situated between the rotor (5) and a rotary shaft (10), and a pre-stressed spring (8) situated at one end of the rotor, wherein said helical structure and said spring are arranged to enable axial displacement of the rotor relative to the shaft, and thereby vary electrical machinery characteristics of the electric machine (to pull other selected control structure 17), in response to reverse torque resulting from interaction between said rotor, said magnetic field structure, and a load or driving device (12).

Regarding claim 35, it is noted that Martinek also shows the external device for controlling the axial displacement of the rotor exteriorly (Figure 3 for DC motor and Figure 4 for AC motor).

Regarding claims 23, 24, 26, 27, 29, 34, 36, 39, and 43, it is noted that Martinek also shows all of the limitations of the claimed invention.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 28 and 38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Martinek in view of Price (1,131,551).

Regarding claims 28 and 38, Martinek shows all of the limitations of the claimed invention except for the machine being a generator.

Price shows a generator for the purpose of generating electricity.

Since Martinek and Price are all from the same field of endeavor; the purpose disclosed by one inventor would have been recognized in the pertinent art of the others.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to make the machine as a generator as taught by Price for the purpose discussed above.

7. Claims 31-33, 37 and 40-42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Martinek in view of Hinz (2,694,781).

Regarding claims 31-33, 37, and 40-42, Martinek shows all of the limitations of the claimed invention except for properties of both said magnetic field structure and said rotor being varied in an axial direction to vary magnetic field density between the rotor

Art Unit: 2834

and the magnetic field structure and thereby vary operational characteristics of the electrical machine with axial displacement of the rotor.

Hinz shows properties of both said magnetic field structure and said rotor being varied in an axial direction to vary magnetic field density between the rotor and the magnetic field structure and thereby vary operational characteristics of the electrical machine with axial displacement of the rotor for the purpose of reducing length.

Since Martinek and Hinz are all from the same field of endeavor; the purpose disclosed by one inventor would have been recognized in the pertinent art of the others.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to make the machine with varied properties in an axial direction of both magnetic field structure and rotor as taught by Hinz for the purpose discussed above.

Information on How to Contact USPTO

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dang D Le whose telephone number is (571) 272-2027. The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Darren Schuberg can be reached on (571) 272-2044. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
